(54) Title: **BALLAST TEST DUMMY**

(57) Abstract: A ballast test dummy (100) is in the shape of a human body with separate parts (110, 120, 200, 300, 820, 840) that can be individually filled with fluid. The apparatus, once filled with the fluid, will have a size, shape, weight, and weight distribution similar to that of a human body. The connections of the separate parts (110, 120, 200, 300, 820, 840) allow for the movement of the parts so that the test dummy (100) can be adjusted into multiple positions, e.g. standing, sitting, and crouching. The parts (110, 120, 200, 300, 820, 840) can be assembled, disassembled, and reassembled to allow for the movement and/or relocation of the separate parts or the test dummy (100).
